

As a powerful video splicing machine, MIG-CL9400 is the CPU of the big screen mosaic system. It supports multiple input signals, splice, zoom, open windows, overlay, roam at different kinds of screens. The hardware build-ups are based on advanced FPGA array and high speed digital bus-matrix. As for all kinds of input signal, it is able to recover the original one by its RGB 24bits/60 Hz internal processor. At the same time, its prominent image scaling engine ensures clear seamless splicing without delay.

Deeply modular design, support VGA DVI SDI IP HDMI(2K/4K) DP(4K) input signal, input EDID management. DVI and SDI output resolution can be customized, for any LED screen pixel-to-pixel display. The whole series support USB upgrade and network/RS232 control, easy for after-sale service and technical support. Multiple input/output configuration for different projects, 3U/4U/8U/14U/19U chassis is available.

MIG-CL9400 series products are widely used in government, transport, medical, education, hydroelectric, broadcasting & TV and shopping mall, like multi-media conference room, multi-functional hall, monitor center, studio, exhibition center, opera and so on.

✓ Features

- ✓ Pure FPGA hardware architecture
- ✓ Freely adjustment for the windows' size and position
- ✓ 4 independent layers per output
- ✓ Layer full screen roaming
- ✓ Supports mosaic for over 8 times scaled
- ✓ Customized output resolution
- ✓ Supports different pixel pitch led screen mosaic
- ✓ Pixel to pixel display HD backgrounds
- ✓ Internal 24 bit RGB processing
- ✓ Dual redundant power supply
- ✓ 60Hz real-time processing
- ✓ System running real-time monitoring
- ✓ Input EDID management
- ✓ Projector edge blending mosaic
- ✓ 4K×2K/8K×1K@60Hz input
- ✓ 4K×2K/8K×1K@60Hz input
- ✓ Real-time seamless switching
- ✓ Fade effect among layers
- ✓ Caption & label
- ✓ Layer grouping
- ✓ 8 windows of input monitoring

▷ MIG-CL9403 introduction

LCD Screen

Display the machine's status information, including input/output boards, hardware version, temperature, network setting, etc.

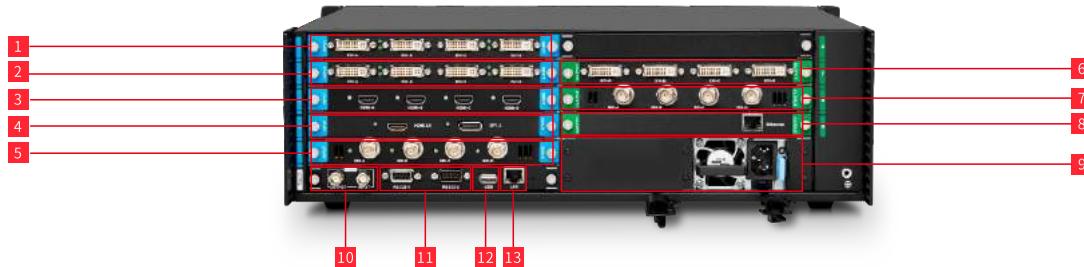

Menu Operation

"OK" "→" and the knob are used to read the menu on the LCD screen.

Functions Button

Button 1-10 are for machine's setting like IP, subnet mask, mode shifting.

- | | | | |
|--|---------------------------|-----------------------|-----------------------|
| 1 DVI Input | 2 DVI Input | 3 HDMI Input | 4 HDMI2.0、DP1.2 Input |
| 5 SDI Input | 6 DVI Output | 7 SDI Output | 8 IP Monitoring |
| 9 Power supply, extendable for dual power redundant backup | 10 Framelock Input/Output | 11 RS232 Control Port | 12 USB Upgrade Port |
| 13 Network Control Port | | | |

▷ Operating Modes

Operating Modes

3 control modes including computer software control, Android software control, and buttons control.

Computer software control is achieved by connecting the machine with a computer via network cable or RS232 cable. Any operation will be done through the software.

Buttons control: To control and select all the template manually

Operating interface

Computer Host interface

Android interface

LCD Screen

Display the machine's status information, including input/output boards, hardware version, temperature, network setting, etc.

Menu Operation

"OK" " ↴ " and the knob are used to read the menu on the LCD screen.

Functions Button

Button 1-10 are for machine's setting like IP, subnet mask, mode shifting.

▷ MIG-CL9419 introduction

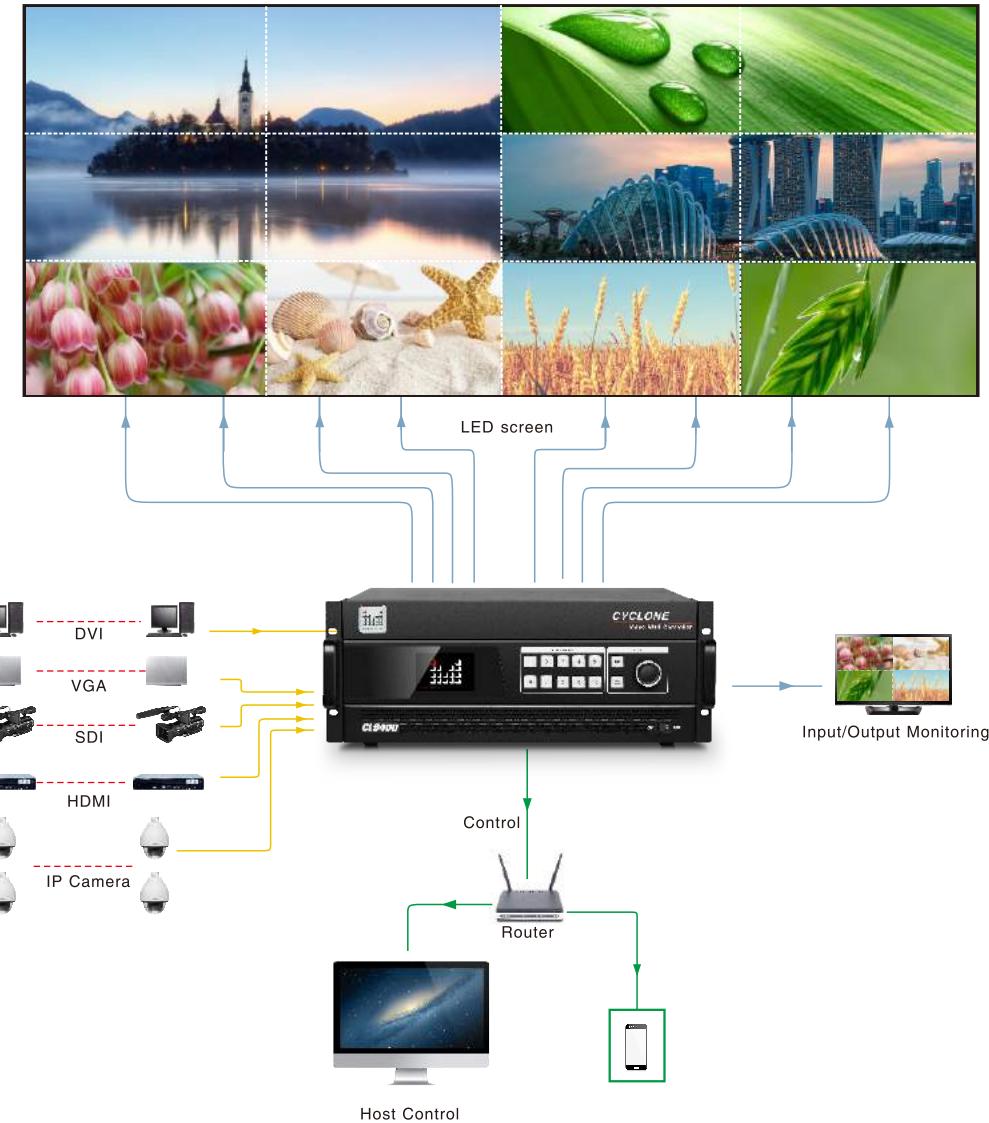

1	DVI Output	2	SDI Output	3	SDI Input	4	HDMI Input
5	DVI Input	6	SDI、VGA Input	7	SDI、DVI Input	8	DP Input
9	HDMI2.0、DP1.2 Input	10	DVI Input	11	HDMI Input	12	Network Control Port
13	USB Upgrade Port	14	RS232 Control Port	15	Framelock Input/Output	16	IP Monitoring
17	DVI Input	18	Dual Power Redundant Backup				

▷ Main Features & Application

□ High resolution LED wall mosaic

High resolution LED Wall mosaic will be realized with corresponding sending cards and the machine's output customization. One 3U chassis machine supports 12 panels mosaic at most; 4U chassis supports 20 at most; 8U chassis supports 32 at most, 14U/19U chassis supports 72 at most. No frame drop or image tear. Supports 4K×2K/8K×1K@60Hz DP input and high resolution pixel-to-pixel display.

✓ Main Features & Application

□ 4 independent layers output by 1 output

One DVI output can display 4 independent layers and one high definition background. The position, size and order of each layer can be set freely. Input signal of any layer can also be set freely with the machine's inner video matrix.

□ Caption & label

User can set the caption's size, color, moving speed, background color without PC or USB memory disk, also insert a picture to serve as a label.

Label function(letter or image) allows you mark the layers by words to help memorizing and selecting the right layer exactly and rapidly.

▷ Main Features & Application

□ IP monitoring

By connecting the network control port, the IP monitor and the host computer into one local area network, you monitoring all the input and output status on the software.

□ Multiviewer Output

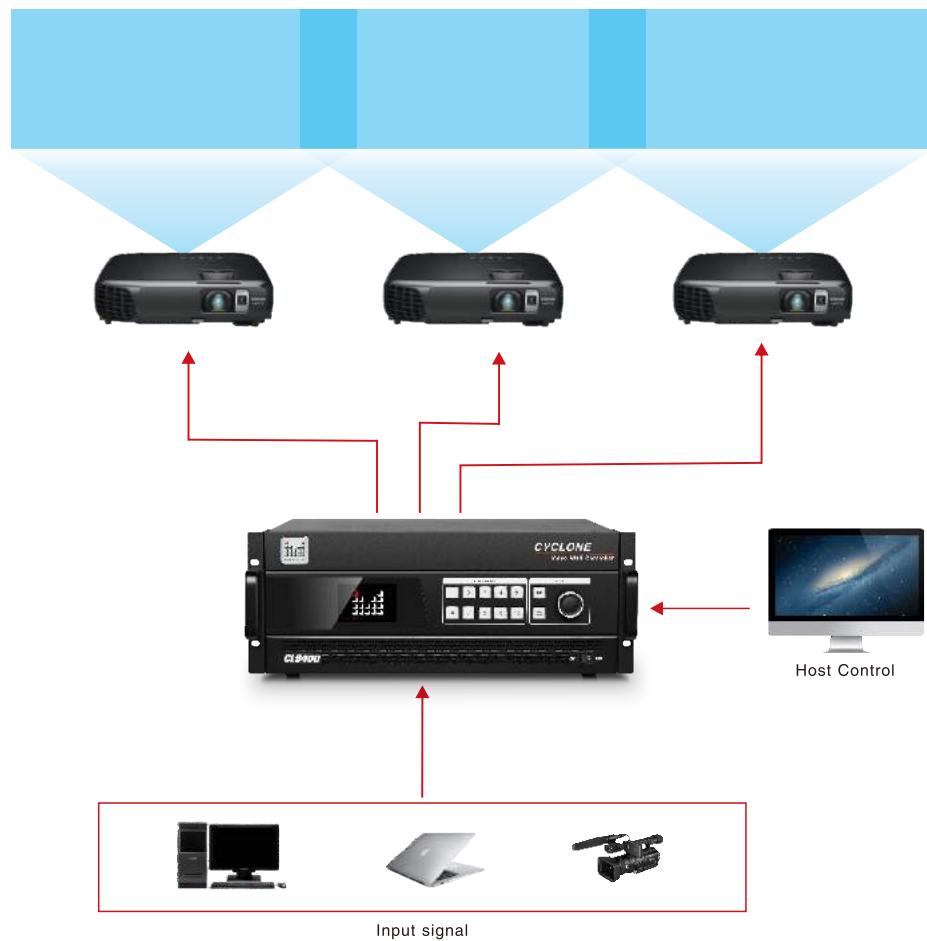

One multiviewer output allows monitoring up to 8 input sources. The window layout can be customized.

▷ Main Features & Application

□ Projector edge blending mosaic

One 3U chassis machine supports 12 times mosaic at most, one 4U chassis controller supports 20 projectors mosaic at most; one 8U chassis controller supports 32 projectors mosaic at most, one 14U/19U chassis supports 72 at most.. Size, position, transparency and other parameters of the blending parts can be changed via edge blending function.

Technical Specification

Chassis parameter					
Chassis	3U	4U	8U	14U	19U
Input ports	20	32	48	72	144
Output ports	12	20	32	72	72
Power voltage	110-240V				
Power frequency	50/60Hz				
Operation temperature	0~45°C				
ChassisN.W.(KG)	9.6	11.0	18. 85	58.0	80
Overall power consumption(W)	300	500	750	1900	2500
Dimension(MM)	482.6×371×133	482.6×371×177	482.6×355×430	482.6×567.5×621	482.6×567.5×915.2

Input card
